

Retail Sales Performance Analysis

Portfolio Project

Business Intelligence & Sales Analytics

Microsoft Excel | Data Cleaning | Pivot Tables | Dashboard | KPI Analysis

Prepared by Nana Qwabena • July 2026

Project Overview

This portfolio project demonstrates an end-to-end retail sales analytics workflow using Microsoft Excel. Raw transactional data was transformed into executive-ready insights through data cleaning, validation, exploratory data analysis (EDA), KPI development, and dashboard design.

Business Objectives

- Improve visibility into business performance.
- Measure revenue, profit, and sales trends.
- Evaluate product, regional, and customer performance.
- Deliver an interactive executive dashboard.

Tools & Skills

Tools	Skills Demonstrated
Microsoft Excel	Data Cleaning
Pivot Tables & Charts	Exploratory Data Analysis
Dashboard	KPI Development
Formulas & Validation	Business Storytelling

Dataset Snapshot

Records: 50,000 retail transactions

Period: 2024–2025

Categories: Electronics, Fashion, Groceries, Home Appliances

Segments: Consumer, Corporate, Home Office

Analytics Process

1. Data Cleaning
2. Data Validation
3. Feature Engineering
4. EDA
5. Dashboard Development
6. Business Insights & Recommendations

Key Findings

- Revenue exceeded GH¢186 million.

- Profit margin reached approximately 28%.
- Electronics generated the highest revenue.
- Corporate customers contributed the greatest profit.
- Eastern Region led overall sales performance.

Business Recommendations

- Maintain stock for top-selling products.
- Improve marketing in underperforming regions.
- Reward high-performing salespeople.
- Monitor revenue trends using dashboard KPIs.

Portfolio Highlights

This project showcases practical business analytics skills suitable for Data Analyst and Business Intelligence roles. It demonstrates proficiency in transforming raw data into strategic insights and executive dashboards.
